To whom it may concern:

This letter is to confirm that Cambridge Brass product 46-2 Belleville Washer Kit, is for use on Saddles and Clamps when used on HDPE Water Mains.

The purpose of the Belleville washer, when installed properly is to maintain the tension on the fasteners of a Saddle or Clamp when the size of the HDPE main changes due to pressure fluctuations and associated diametric expansion and relaxation.

Please ensure all installations are consistent with the installation card (310967A) for the 46-2 kit shown below.

Should you have any questions or concerns, please contact your Sales representative, or contact Customer Service at the numbers above.

Don Stark, P.Eng
Director of Technical Services
